

## **TWC 'Policy' for Those Storing Equipment**

**For the benefit of all, the trailer captains will be asked to take an active role in trailer management again this season. However, it's really up to the individual member who stores equipment to do their share.**

- 1) Please, do not over-load your slot in a way that interferes with someone else's storage space.
- 2) To safeguard your equipment, please label everything, especially your 1 piece masts stored in the rafters.
- 3) The rafters are for storing 1 piece masts only, not sails or booms. And please, don't hang wet wetsuits on the rafters to dry. All that happens in our poorly ventilated trailers is mold.
- 4) Please remove the fins from the boards unless they are small, and not interfering with others.
- 5) The aisles need to be kept clear. If you use a container of some kind to hold small bits and pieces, please ensure that it fits completely within your slot, not in the aisle. (Actually this is a safety issue)
- 6) Wide (75+ cm) boards are getting to be a problem. In the trailers these wide boards are difficult to get by, especially when they are found on both sides of the aisle. Until we have a better solution, we will try to have these wide boards stored on one side of the trailer. This will mean that some people may be asked to shift sides. Your cooperation will be appreciated.
- 7) **Finally, an attempt will be made to have a trailer clean out day at some point early in the season. This may be difficult to coordinate, but the trailer captains will make an attempt. Please lend a hand.**

Thanks and have a great windsurfing season
